

V2 BASE SEPOLIA - VERIFIED

The payment that refuses to pay.

An unsigned AI-assisted treasury plan becomes a payer-signed intent. Separate role-wallet approvals and fresh risk credentials gate escrow. A late synthetic sanctions update then forces a real on-chain release failure and a full payer refund.

26 PUBLIC RECEIPTS

SEPARATE ADDRESSES

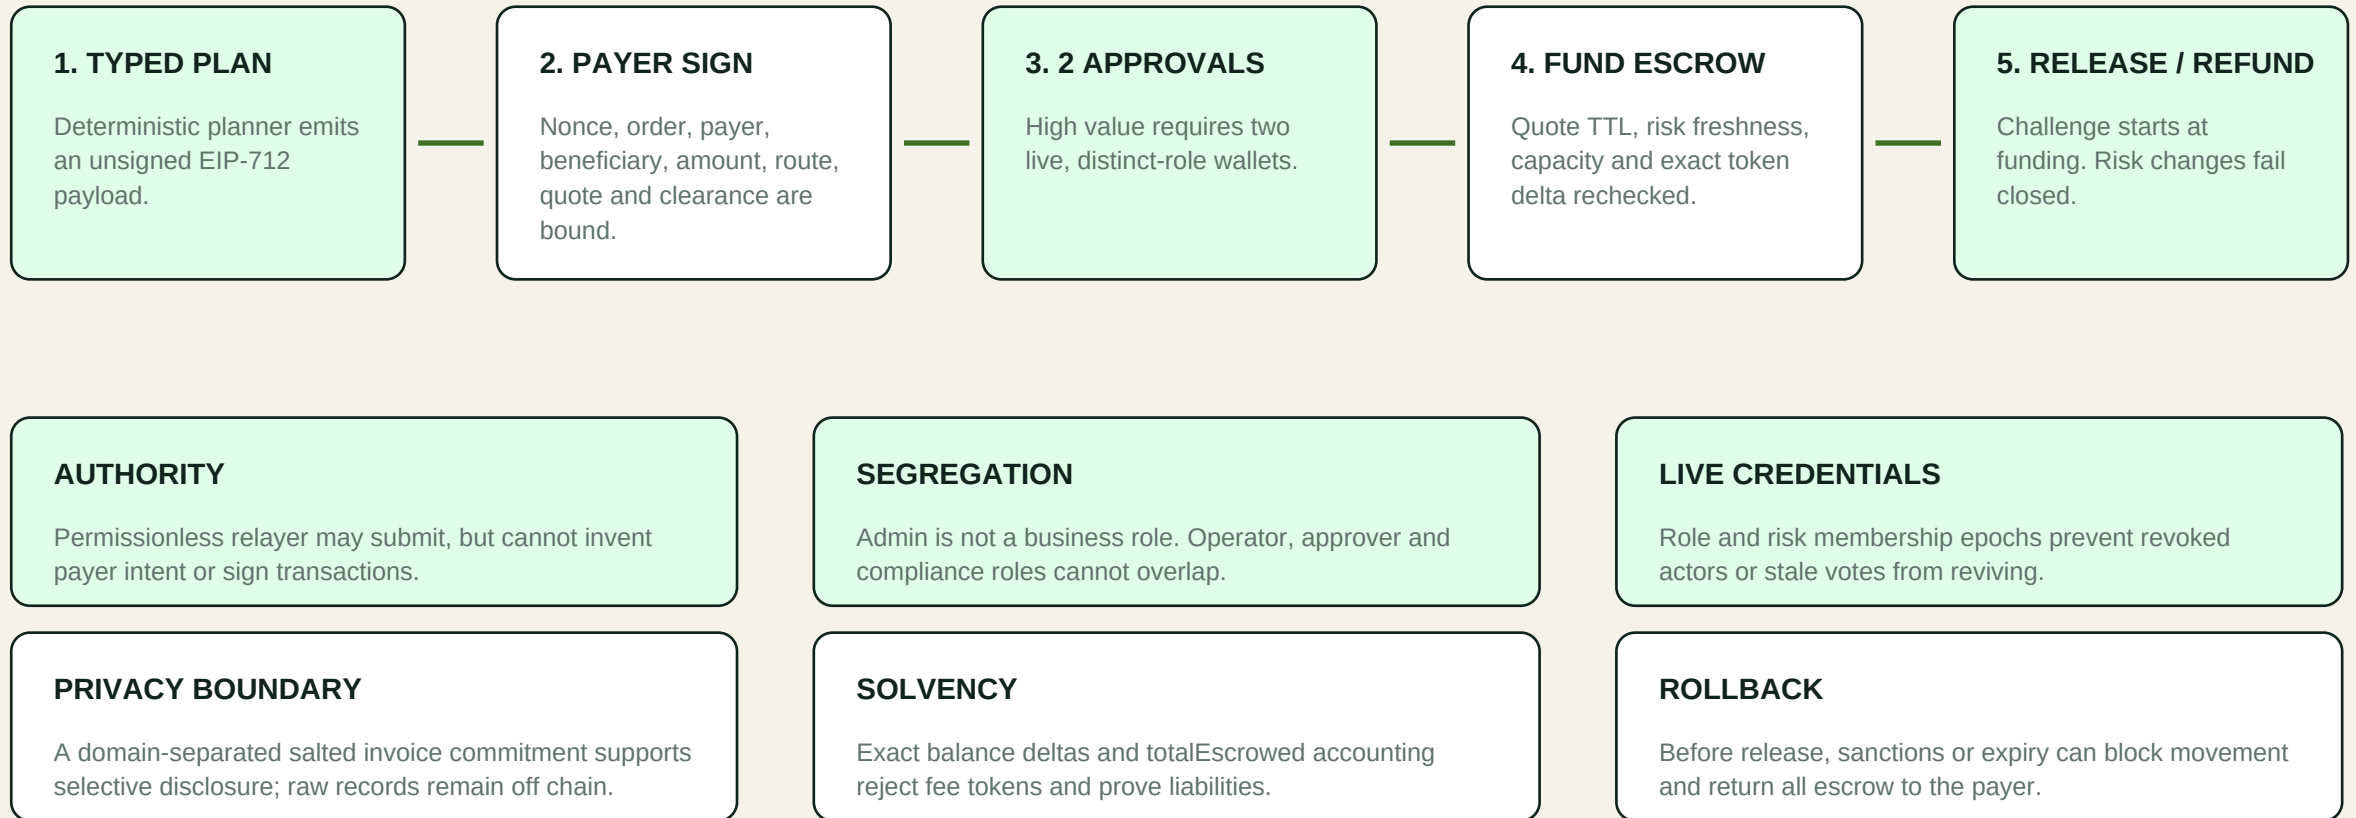

ESCROW = 0

THE CHAIN-LINKED FAILURE PATH

1	Fund 15,000 mUSD escrow 0xb9510b3a...5f3695	STATUS 1 funded
2	Synthetic sanctions update 0x8f02b805...e2b6f8	STATUS 1 risk epoch +1
3	Release is rejected on chain 0xf4be9274...31f8db	STATUS 0 no transfer
4	Payer cancels and is refunded 0x251b3f96...236b07	STATUS 1 15,000 back

AI proposes. Payer signs.

The contract alone moves value.

REAL CODEX TRACE Read-only / schema-valid / 27.432 s / no signing, broadcast or state change

Claim discipline: AI assists explanation and orchestration. Core state transitions are deterministic, payer-signed and contract-verifiable.

Two outcomes. One accounting truth.

CLEAN PATH

15,000 mUSD released
to a separate beneficiary address

release 0xb1d2be7aee2381be...16fa3d43

Final state Released (4) Beneficiary 15,000 mUSD

BLOCKED PATH

Release status 0
then full payer refund

blocked 0xf4be9274fc867a...2031f8db

refund 0x251b3f969c6ded...53236b07

Final state Cancelled (5) Blocked beneficiary 0 mUSD

FINAL RECONCILIATION

Payer	Clean beneficiary	Blocked beneficiary	Escrow	totalEscrowed	Solvent
15,000 mUSD	15,000 mUSD	0 mUSD	0 mUSD	0	TRUE

45.45% branch coverage

0**triaged high/medium**

Slither project-code findings; not an audit

22,427 B**runtime bytecode**

2,149 bytes below EIP-170

26**public receipts**

25 success + 1 expected status-0 failure

WHAT IS PROVEN

- Separate role wallets, payer-signed intent, two approvals, exact escrow accounting
- Risk update after funding blocks release on chain, then full refund reconciles
- Salted, domain-bound commitment opens correctly and rejects altered disclosure

WHAT IS NOT CLAIMED

- No USDC, fiat, FX, off-ramp, bridge or real cross-border settlement
- No certified sanctions/KYC feed; SG-CN and screening inputs are synthetic
- No ZK privacy, independent audit, formal verification or production key management
